Pharma, a different business

Storage and transportation of pharmaceuticals is a different type of business. A business CyberFreight masters like no one else does. Both our transport equipment as well as our storage facilities comply with all rules and regulations, legally imposed for handling medicines and other pharmaceutical products. And, our qualified pharma-staff give it all they got every single day, in order to handle all your temperature-sensitive shipments in a controlled and certified manner.

We and our staff see ourselves as an extension of your company and we will do anything we can, in order to ensure we will comply with all your requirements and wishes.

Temperature controlled storage

CyberFreight Pharma Logistics does not just manage the transportation of your pharmaceuticals, bio-pharmaceuticals and OTC's, but they also are able to provide a GDP storage solution, certified and temperature controlled.

In Nieuw Vennep CyberFreight has a special pharma-warehouse, where the temperature is maintained between 15 and 25 degrees Celsius.

Special cooling units guarantee the quality of pharmaceutical products requiring lower temperatures, while qualified staff ensures you are continuously updated on the status of your shipment.

Processes according GDP Guidelines

Obviously all our processes do fully comply with all GDP Guidelines. This means we register the temperature of your shipment upon arrival and continue monitoring this while in GDP storage. Next to that we ensure correct documentation, relieving you of any concern about your shipments and you can depend on it fully, that all shipment ware handled timely and accurately.

GDP Distribution of your pharma products according GDP

Out of our storage facility we can also handle final GDP distribution of your pharmaceuticals to hospitals and

pharmacies. Within the Netherlands, but also to other European countries, since CyberFreight Pharma Logistics has all the necessary licenses, including the Good Distribution Practice Wholesale license.

Cyberfreight offers LTL (*Less Than Truckloads*) solutions throughout Europe for shipments between 15 and 25 degrees Celsius against very competitive rates. Cyberfreight also offers so called Dual-Temperature solutions (*both temperature options in one truck*). Many trucking companies only offer dedicated transport to the corners of Europe, but distribution of a few pallets is difficult and expensive. Not at Cyberfreight!

GDP Wholesale license

GDP, or Good Distribution Practices, describes all quality requirements for the distribution of pharmaceutical products. The GDP guidelines must ensure maintaining the quality of pharmaceuticals, bio-pharmaceuticals and OTC's during distribution. From purchase till receipt and from storage till export.

For Cyberfreight quality is of paramount importance. Ever since 1999 we are specialized in storage as well as global distribution of goods. Therefore we have invested heavily in high-quality resources, facilities and staff training, so we can also be of service to you in the area of pharma handling with the highest quality of services. That we have succeeded in that, is proven by the fact Cyberfreight Pharma Logistics was granted the GDP Wholesale license and by successfully passing the numerous audits by customers as well as the Ministry of Health and Safety.

What can we do for you?

Cyberfreight Pharma Logistics operates a GDP temperature controlled facility in Nieuw Vennep. Here temperature is maintained between 15 and 25 degrees Celsius and where special cooling-units ensure the quality of pharma shipments, that require storage under lower, controlled temperatures. Qualified employees make sure you are kept up to date on the status of your shipment and also manage, on request, the distribution of your pharmaceuticals to hospitals and pharmacies in the Benelux and the rest of Europe.
